

DT-2 On-off Tool

The **DT-2 On/Off Tool** is a tubing receptacle allowing isolation of a lower zone using a wireline blanking plug. The tubing string can then be removed from the well. When re-run, the tubing string automatically re-engages to the stinger, and the blanking plug can be retrieved by wireline. The DT-2 On-Off Tool is run above the ASI-X Packer.

Note: Stingers sold separately.

Features and Benefits

- By-pass below upper slips to wash debris when valve is open
- Blanking plug seats in top of stinger to prevent debris build-up
- Bonded seal allows disconnects and re-connects
- Right-hand or left-hand release
- Milling shoe allows rotation through debris

DT-2 On/Off Tool
